**CHAMBERLAIN® PROFESSIONAL PRODUCTS RAISES THE BAR ON
AFFORDABLE TELEPHONE ACCESS CONTROL SYSTEM**
Less is More with New, Feature-Rich LiftMaster® TAC1 System

Elmhurst, IL – January 2010 – Chamberlain Professional Products, the single source provider for secure, convenient, quality and stylish products for every access point, introduces the LiftMaster TAC1 Telephone Access Control system. This new integrated access system offers homeowners a wired, single line telephone entry system that is equipped with the features most requested by today’s consumers at the industry’s most affordable price. Attractive yet durable, TAC1 is easy to use, works together seamlessly with other LiftMaster access control systems yet is devoid of unnecessary “add-ons” or complexities, proving to be a realistic and functional solution for homeowners and a point of differentiation for builders when planning for the access controls on a new build or remodel.

Installed by a LiftMaster professional, the TAC1 system quickly wires into an existing telephone line and features a tamper-resistant poly enclosure engineered for maximum impact resistance without dents or corrosion. The system also offers several innovative features that are high on the priority list for homeowners, providing them with seamless control of their property through the access points linked to this system.

For example, the TAC1 system features flexible dual control, which means that it can be connected to two devices such as a LiftMaster garage or gate access system or any LiftMaster product equipped with the Security+® receiver, and each entrance can be opened independently of the other access control device.

In addition, this system offers several unique “mode settings” to specifically meet the access demands of an end-user in any situation. For example, “Party Mode” opens the entrance and remains open for several guests to enter; “Vacation Mode” locks the system down and only allows administrator control to reactivate the system; “Do Not Disturb Mode” silences the telephone ring

from a visitor at the gate for additional privacy; “Intercom Mode” is used to make wired active phones available in “Cellular Only” homes. Call forwarding, which allows the end-user to greet a visitor even when they are not home, is also a key benefit to having a TAC1 system installed.

“The state-of-the-art, feature-centric TAC1 system provides the homeowner with a truly easy-to-use and affordable solution for seamless connectivity and control of their property’s access points, without breaking the bank,” said Ken Roehl, vice president, marketing, Chamberlain Professional Products. “This system focuses on the most popular and practical feature sets at the most competitive price in the market.”

Backed by the proven service and support synonymous with the LiftMaster brand, the TAC1 Telephone Control Access System also ensures digital voice quality and comes standard with a unique double ring on the system’s main telephone to distinguish between an incoming phone call or a visitor request call. Adapting to the needs of the end-user, the TAC1 system also includes call waiting so a call from the door or gate can be answered while in the middle of an outside call. For added security, the system also includes a tamper alarm, which is activated if a forced entry is detected; not only does an audible alarm sound upon activation, but the TAC1 system also shuts down for two minutes and automatically sends a message to the phone in the home.

The Chamberlain Group, Inc. manufactures and markets access control products including residential garage door openers, commercial door operators, residential and commercial gate operators, telephone entry systems and related access control products. For inquiries on the LiftMaster TAC1 system, please contact 800.528.6563 or visit www.LiftMaster.com.
