The Maintenance Alert System™ allows the installer to set an internal Maintenance Cycle Counter. An LED on the 3-button station will signal when the set number of cycles is reached or when the opener requires immediate service.
Before attempting to install, operate or maintain the operator, you must read and fully understand this manual and follow all safety instructions.

These instructions are intended to highlight certain safety related issues. These instructions are not intended to be comprehensive. Because each application is unique, it is the responsibility of the purchaser, designer, installer and end user to ensure that the total door system is safe for its intended use.

**SPECIFICATIONS**

### MECHANICAL

**DRIVE REDUCTION:**............40:1 Reduction  
Heavy duty bronze worm gear reducer

**OUTPUT SHAFT SPEED:**.....43 R.P.M.

**DOOR SPEED:**..................4 - 10” per sec.  
depending on door

**BRAKE:**..........................Solenoid actuated disc brake

**HOIST WHEEL:**..................Standard mounting on left or right side

### ELECTRICAL

**TRANSFORMER:**..............24VAC Secondary

**CONTROL STATION:**......NEMA 1 three button station  
OPEN/CLOSE/STOP W/ LED

**WIRING TYPE:**...............C2 (Standard)  
Momentary contact to OPEN & STOP, constant pressure to close, plus wiring for sensing device to reverse and auxiliary devices to open and close with open override. See pages 14 and 15 for optional wiring types and operating modes.

**LIMIT ADJUST:**..............Linear driven, fully adjustable screw type cams. Adjustable to 30 feet.

### SAFETY

**DISCONNECT:**..............Floor level chain hoist with electrical interlock for emergency manual door operation

**CLUTCH:** (Optional) ....Adjustable torque limiter type

**SAFETY PHOTO EYES:** (Optional) Thru beam or retro reflective devices used to provide non-contact safety protection. Directly interface to Lift Master CPS-L or CPS-LN4 Commercial Protector Systems.

**SAFETY EDGE:**...............(Optional) Electric or pneumatic sensing device attached to the bottom edge of door.

A REVERSING DEVICE IS STRONGLY RECOMMENDED FOR ALL COMMERCIAL OPERATOR INSTALLATIONS. REQUIRED WHEN THE 3 BUTTON CONTROL STATION IS OUT OF SIGHT OF DOOR OR ANY OTHER CONTROL (AUTOMATIC OR MANUAL) IS USED.

### MOTOR

**TYPE:** .........................Continuous duty

**HORSEPOWER:**..............1/2, 3/4, 1, 1-1/2 Hp  
2, 3 HP

**SPEED:**..........................1725 RPM

**VOLTAGE:**.......................115, 220, 230 Single phase  
230, 380, 460, 575 Three phase

**CURRENT:**......................See motor nameplate

**MOTOR TYPE:** ................Continuous duty

**HORSEPOWER:**................1/2, 3/4, 1, 1-1/2 Hp  
2, 3 HP

**SPEED:**..........................1725 RPM

**VOLTAGE:**.......................115, 220, 230 Single phase  
230, 380, 460, 575 Three phase

**CURRENT:**......................See motor nameplate

### WEIGHTS AND DIMENSIONS

**HANGING WEIGHT:** .........80-110 LBS.

### NOTES:

1) Output Shaft with 1” x 1/4” Key for 1/2 thru 2Hp operators, 1-1/4” x 1/4” Key for 3Hp operators.

2) MT’G CENTERS:  
   - X = 4-3/4”; Y = 5-1/2” for 1/2 thru 2Hp operators  
   - X = 7-17/32”; Y = 9-1/16” for 3Hp operators

3) Hand Chain Wheel extends 1-5/8” beyond operator in vertical mounting position as shown.
CAUTION

TO AVOID DAMAGE TO DOOR AND OPERATOR, MAKE ALL DOOR LOCKS INOPERATIVE. SECURE LOCK(S) IN “OPEN” POSITION.
IF THE DOOR LOCK NEEDS TO REMAIN FUNCTIONAL, INSTALL AN INTERLOCK SWITCH.
DO NOT CONNECT ELECTRIC POWER UNTIL INSTRUCTED TO DO SO.

WARNING

KEEP DOOR BALANCED. STICKING OR BINDING DOORS MUST BE REPAIRED. DOORS, DOOR SPRINGS, CABLES, PULLEYS, BRACKETS AND THEIR HARDWARE MAY BE UNDER EXTREME TENSION AND CAN CAUSE SERIOUS PERSONAL INJURY. CALL A PROFESSIONAL DOOR SERVICE-MAN TO MOVE OR ADJUST DOOR SPRINGS OR HARDWARE.

SITE PREPARATIONS

It is imperative that the wall or mounting surface provide adequate support for the operator. This surface must:

a) Be rigid to prevent play between operator and door shaft.
b) Provide a level base.
c) Permit the operator to be fastened securely and with the drive shaft parallel to the door shaft.

The safety and wear of the operator will be adversely affected if any of the above requirements are not met.

WARNING

ALL DOORS INTENDED TO BE MOTOR OPERATED SHOULD BE MANUFACTURED WITH SOLID DOOR SHAFTS.

OPERATOR PREPARATION

The GH operator may be mounted on either the right (standard) or left side of door, and in either a vertical (standard) or horizontal mounting position. Refer to the steps below if you require the hand chain and/or disconnect chain to be on the opposite side of the operator; Or if the operator is being mounted in a horizontal position.

Hand Chain Right/Left Conversion
Remove the two snap rings (1 pc. outer, 1 pc inner) on hand chain shaft assembly. Position roll-pin to fit through cutout in frame and slide complete shaft assembly through housing and bevel gear. Insert shaft assembly on opposite side of housing, and replace bevel gear, bearing, hardware, and snap rings on the opposite side of shaft in the same manner.

Disconnect Lever Right/Left Conversion
Remove cotter pins on the ends of the disconnect shaft (square shaft), move the disconnect lever arm to the opposite side, and replace the cotter pins. Be sure to keep two(2) 12ga. washers on the side without the lever arm.

Horizontal Mounting Conversion
Remove cotter pins on the ends of the disconnect shaft (square shaft), and remove lever. Replace lever using square hole on opposite end of lever. Reposition sash chain to opposite end of lever also. Replace cotter pins.
Before your operator is installed, be sure the door has been properly aligned and is working smoothly. The operator may be wall mounted or mounted on a bracket or shelf. If necessary, refer to the operator preparations on page 3. Refer to the illustration and instructions below that suits your application.

1a. **Wall Mounting**
   The operator should generally be installed below the door shaft, and as close to the door as possible. The optimum distance between the door shaft and operator drive shaft is between 12" - 15". Refer to Figure 3.

**FIGURE 3**

1b. **Bracket or Shelf Mounting**
   The operator may be mounted either above or below the door shaft. The optimum distance between the door shaft and operator drive shaft is between 12" - 15". Refer to Figure 4.

**FIGURE 4**

**IMPORTANT:** The shelf or bracket must provide adequate support, prevent play between operator and door shaft, and permit operator to be fastened securely and with the drive shaft parallel to the door shaft.

1c. Place door sprocket on the door shaft. Do not insert the key at this time.
2. Place drive sprocket on the appropriate side of the operator. Do not insert the key at this time.
3. Wrap drive chain around door sprocket and join roller chain ends together with master link.
4. Raise operator to approximate mounting position and position chain over operator sprocket.
5. Raise or lower operator until the chain is taut (not tight). Make sure the operator output shaft is parallel to door shaft and sprockets are aligned. When in position, secure the operator to wall or mounting bracket.
6. Align sprockets and secure, (see Figure 5).

**FIGURE 5**
These operators are equipped with a manual hoist. An electrical interlock will disable the electrical controls when the hoist is used.

To operate the hoist:

1. Pull the disconnect chain (small chain) to engage the hoist mechanism. The disconnect chain may be locked in position by slipping the end through the keyhole of the chain keeper mounted on the wall.

2. Operate the door in the desired direction by pulling on one side or the other of the continuous loop hoist chain (large chain).

3. The disconnect chain must be released from the chain keeper before the door will operate again electrically.

EMERGENCY MANUAL OPERATION

This operator has provisions for manually operating the door in case of emergency or power failure. Refer to the appropriate instructions below for your model operator.

Model GH

These operators are equipped with a manual hoist. An electrical interlock will disable the electrical controls when the hoist is used.

To operate the hoist:

1. Pull the disconnect chain (small chain) to engage the hoist mechanism. The disconnect chain may be locked in position by slipping the end through the keyhole of the chain keeper mounted on the wall.

2. Operate the door in the desired direction by pulling on one side or the other of the continuous loop hoist chain (large chain).

3. The disconnect chain must be released from the chain keeper before the door will operate again electrically.

ENTRAPMENT PROTECTION ACCESSORIES (OPTIONAL)

REVERSING DEVICE (OPTIONAL)

WARNING

IF CONTROL STATION CANNOT BE INSTALLED IN THE LINE OF SIGHT WITH THE DOOR, OR IF ANY DEVICE OTHER THAN THE CONTROL STATION IS USED TO ACTIVATE THE DOOR, A REVERSING DEVICE MUST BE INSTALLED ON THE BOTTOM OF THE DOOR. FAILURE TO INSTALL A REVERSING DEVICE UNDER THESE CIRCUMSTANCES MAY RESULT IN SERIOUS PERSONAL INJURY OR DEATH.
PHOTO EYES & SENSING EDGES

Sensing devices supplied for door industry type operators with an isolated normally open (N.O.) dry contact output are compatible with your operator. This includes through beam and retro reflective photo eyes, and pneumatic and electric edges. If your door does not have bottom safety photo eyes or a sensing edge and you wish to add a safety device to your application, please contact your local LiftMaster Authorized Dealer.

If not pre-installed by the door manufacturer, mount the sensing edge on the door according to the instructions provided with the edge. The sensing edge may be electrically connected by either coiled cord or take-up reel.

Important Notes:

a) Proceed with Limit Switch Adjustments before making any sensing edge wiring connections to operator as described below.

b) Electrician must hardwire the junction box to the operator electrical box in accordance with local codes.

LIMIT SWITCH ADJUSTMENT

MAKE SURE THE LIMIT NUTS ARE POSITIONED BETWEEN THE LIMIT SWITCH ACTUATORS BEFORE PROCEEDING WITH ADJUSTMENTS.

1. To adjust limit nuts depress retaining plate to allow nut to spin freely. After adjustment, release plate and ensure it seats fully in slots of both nuts.

2. To increase door travel, spin nut away from actuator. To decrease door travel, spin limit nut toward actuator.

3. Adjust open limit nut so that door will stop in open position with the bottom of the door even with top of door opening.

4. Repeat Steps 1 and 2 for close cycle. Adjust close limit nut so that actuator is engaged as door fully seats at the floor.

NOTICE

IT IS STRONGLY RECOMMENDED THAT A SAFETY PHOTO EYE OR SENSING EDGE BE USED IN CONJUNCTION WITH THE OPERATOR.

WIRING: For wiring of your sensing device to the operator, refer to the wiring diagram on pages 11-13. See field connection terminals identified as Reversing Device.

TAKE-UP REEL: Take-up reel should be installed 12” above the top of the door.

COIL CORD: Connect operator end of coil cord to junction box (not supplied) fastened to the wall approximately halfway up the door opening.

If other problems persist, call our toll-free number for assistance - 1-800-528-2806.
Before installing power wiring or control stations be sure to follow all specifications and warnings described below. Failure to do so may result in severe injury to persons and/or damage to operator.

The operator electrical box is only to be accessed by trained “LIFTMASTER” technicians. If service is required contact your local LIFTMASTER dealer.

Do not install any wiring or attempt to run the operator without consulting the wiring diagram. Install the optional Reversing Edge before proceeding with the Control Station installation.

Remove the cover from the electrical enclosure. Inside this enclosure you will find the wiring diagram(s) for your unit. Refer to the diagram (glued on the inside of the cover) for all connections described below. If this diagram is missing, call the number on the back of this manual. DO NOT INSTALL ANY WIRING OR ATTEMPT TO RUN THIS OPERATOR WITHOUT CONSULTING THE WIRING DIAGRAM.

**IMPORTANT SAFETY NOTES**

---

**WARNING**

INSTALL THE CONTROL STATION IN LINE OF SIGHT WITH THE DOOR, BUT AWAY FROM THE DOOR AND ITS HARDWARE. IF CONTROL STATION CANNOT BE INSTALLED WHERE DOOR IS VISIBLE, OR IF ANY DEVICE OTHER THAN THE CONTROL STATION IS USED TO ACTIVATE THE DOOR, A REVERSING DEVICE MUST BE INSTALLED ON THE BOTTOM OF THE DOOR. FAILURE TO INSTALL A REVERSING DEVICE UNDER THESE CIRCUMSTANCES MAY RESULT IN SERIOUS INJURY OR DEATH.

---

**WARNING**

ANY MAINTENANCE TO THE OPERATOR OR IN THE AREA NEAR THE OPERATOR MUST NOT BE PERFORMED UNTIL DISCONNECTING THE ELECTRICAL POWER AND LOCKING-OUT THE POWER VIA THE MAIN DISCONNECT SWITCH. UPON COMPLETION OF MAINTENANCE THE AREA MUST BE CLEARED AND SECURED, AT THAT TIME THE UNIT MAY BE RETURNED TO SERVICE.

---

**WARNING**

TO AVOID DAMAGE TO DOOR AND OPERATOR, MAKE ALL DOOR LOCKS INOPERATIVE. SECURE LOCK(S) IN "OPEN" POSITION. IF THE DOOR LOCK NEEDS TO REMAIN FUNCTIONAL, INSTALL AN INTERLOCK SWITCH.

---

**WARNING**

DISCONNECT POWER AT THE FUSE BOX BEFORE PROCEEDING. OPERATOR MUST BE PROPERLY GROUNDED AND CONNECTED IN ACCORDANCE WITH LOCAL ELECTRICAL CODES. NOTE: THE OPERATOR SHOULD BE ON A SEPARATE FUSED LINE OF ADEQUATE CAPACITY. ALL ELECTRICAL CONNECTIONS MUST BE MADE BY A QUALIFIED ELECTRICIAN.
**POWER WIRING**

**POWER WIRING CONNECTIONS**

1. Connect power wires coming from the main to the captive terminal block in the electrical box enclosure marked with the label shown below.

2. Be sure to run all power wires through the conduit hole in the electrical box enclosure marked with the label shown below.

**ON THREE PHASE MACHINES ONLY:** Incorrect phasing of the power supply will cause the motor to rotate in the wrong direction.

**GROUND WIRING**

1. Connect earth ground to the chassis ground screw in the electrical box enclosure marked with the label shown below.

2. Use same conduit entry into the electrical box as the power wiring.

**IMPORTANT:** THIS UNIT MUST BE PROPERLY GROUNDED. FAILURE TO PROPERLY GROUND THIS UNIT COULD RESULT IN ELECTRIC SHOCK AND SERIOUS INJURY.

**CONTROL STATION WIRING**

**CONTROL WIRING CONNECTIONS**

1. Connect control wires to the TB1 terminal block located on the Printed Circuit Board (shown below).

2. Be sure to run all control wires through the conduit hole in the electrical box enclosure marked with the label shown below.

3. Apply power to the operator. Press OPEN push button and observe direction of door travel and then **Press the STOP button.**

   If door did not move in the correct direction, check for improper wiring at the control station or between operator and control station.

**RADIO CONTROLS**

On all models with B2 control wiring, a terminal bracket marked R1 R2 R3 is located on the outside of the electrical enclosure. Any commercial type LiftMaster brand receiver may be mounted to this bracket. The operator will then open a fully closed door, close a fully open door, stop an opening door, and reverse a closing door from the radio transmitter. In TS control wiring the operator will only open the door or reset the timer to close. However, for additional door control from a 3 button transmitter, a commercial three-channel radio receiver (with connections for OPEN/CLOSE/STOP) is recommended.

**MOUNTING INSTRUCTIONS**

1. Mount Control Stations no further than (12") from each other.

2. Mount Control Stations (12") from the door enclosure.

3. Mount WARNING NOTICE beside or below the Control Station.

4. Mount MAINTENANCE ALERT label to either side of control station.
1. Loosen set screws on clutch nut.
2. Back off clutch nut until there is very little tension on the clutch spring.
3. Tighten clutch nut gradually until there is just enough tension to permit the operator to move the door smoothly but to allow the clutch to slip if the door is obstructed. When the clutch is properly adjusted, it should generally be possible to stop the door by hand during travel.

**WARNING**

TO AVOID SERIOUS PERSONAL INJURY OR DEATH FROM ELECTROCUTION, DISCONNECT ELECTRIC POWER TO OPERATOR BEFORE ADJUSTING SLIP CLUTCH.

**CAUTION:** The torque limiter clutch is NOT an automatic reversing device. A Reversing Device can be added to bottom edge of door if desired.

**BRAKE ADJUSTMENT**

The brake is adjusted at the factory and should not need additional adjustment for the life of the friction pad. Replace friction pads when necessary. Refer to the illustration for identification of components for the solenoid type brake system.
LOGIC CONTROL (VER. 2.0) 1 PHASE WIRING DIAGRAM

WARNING
Always Disconnect Power Whenever Installing or Servicing the Door Operator.

230 VOLT MOTOR CONNECTION

115 VOLT MOTOR CONNECTION

NOTE:
Contactor 1 PH / 3 PH jumper should be in 1 PH position.

Note:
1) See Owner’s Manual for Dip Switch Functions and Programming Procedures
2) To Reverse Motor Direction:
   115 Volts: ALWAYS EXCHANGE PURPLE & GRAY ALL VOLTS & PHASES.
   230 Volts: INTERCHANGE PURPLE (E10) & GRAY (E15) WIRES AT LOGIC BOARD.
* - BLUE WIRE MUST BE INSULATED ON 230V 1PH.
** - Transformer Primary Voltage same as Line Voltage.
Notes:
1) See Owner's Manual for Dip Switch Functions and Programming Procedures
2) TO REVERSE MOTOR DIRECTION: INTERCHANGE ANY 2 OF THE 3 POWER WIRES
   AT L1, L2 & L3, OR EXCHANGE PURPLE & GRAY MOTOR LEADS AT BOARD CONNECTIONS E17 & E6 (3PH UNITS ONLY).
**- Transformer Primary Voltage same as Line Voltage.
Note:
1) See Owner’s Manual for Dip Switch Functions and Programming Procedures
2) TO REVERSE MOTOR DIRECTION
   115 & 230 VOLTS: INTERCHANGE PURPLE & GRAY WIRES AT CONTACTOR.
   **- Transformer Primary Voltage same as Line Voltage.
Refer to printed circuit board illustration on page 19 for all component locations.

Before Programming the logic board, set the operators open and close limits. LEDs on the logic board are provided to assist setting the limits. As each limit is activated the corresponding LED will light up. The abbreviations are Open Limit Switch (OLS), Close Limit Switch (CLS) and Sensing Limit Switch (SLS). Refer to page 7 for limit switch adjustment instructions.

Logic Control Pushbuttons Open, Close, Stop
Open, Close and Stop buttons are mounted directly on the Logic Control board. This will provide easy programming ability and door control at the electrical box. Either the stop control or a jumper must be wired between terminals 4 and 5 for the on board push buttons to function.

Determine wiring mode:
There are many wiring modes available on the Logic Board. Read the descriptions of the different wiring types to determine which setting will be correct for each application.

Set the dip switches to the desired wiring mode:
Adjust the 4 dip switches on the logic board to match the settings for the desired wiring type. The dip switches are shown in the picture

### SELF MONITORING SAFETY DEVICE OPTIONS

To use the operator in any of the Failsafe wiring modes, or Timer To Close wiring modes (TS, T, FSTS), a LiftMaster self monitoring safety device must be installed.

**Recommended LiftMaster Self Monitoring Safety Devices:**

- CPS-L NEMA 1 Direct Connect Eyes
- CPS-LN4 NEMA 4 Direct Connect Eyes

**NOTE:**

1. External interlocks may be used with all functional modes.
2. Auxiliary devices are any devices that have only dry contacts. Examples are: photocell, loop detector, pneumatic or electrical treads, radio controls, one button stations, pull cords, etc.
3. Open override means that the door may be reversed while closing by activating an opening device without the need to use the stop button first.
RPM Sensor/Auxiliary Reversal System (Programming is Recommended)

**Feature:** By programming the RPM sensor to a specific application, the logic board learns the speed the door travels with reference to the spinning motor. This sensor activates the start winding and recognizes clutch slippage.

**Benefit:** By removing the centrifugal start switch from 1/3 and 1/2 horsepower single-phase motors the leading cause of motor failure is eliminated. The auxiliary reversing benefits of the RPM sensor are designed to prevent excessive door and operator damage upon hitting a solid obstruction. LiftMaster recommends the use of safety devices for primary safety protection.

**To Program:**
1. The open and close limits must be set before setting the RPM sensor.
2. Start with the door closed and turn all dip-switches to the off position.
3. Press open then press and hold the "learn" button on the Logic board until the door reaches the full open position. You should see the Learn LED turn off after pressing the learn button; it will turn back on about 5 seconds later. If the LED did not cycle, start over and wait about 1/2 second between pressing "open" and "learn".
4. Return the dip switches to your regular wiring type (C2, B2, etc.) and close the door.

**Note:** LiftMaster 2.0 Logic operators are designed to work in most cases without adjusting the RPM sensor. It is still recommended to set this feature on every installation. This feature will need to be reset if the motor or logic board is ever replaced.

**Maximum Run Timer (Setting is Recommended)**

**Feature:** The door will run in one direction for a set amount of time. Default time is 90 seconds. Installer can adjust the 90 second timer to the open cycle plus 10 seconds.

**Benefit:** Should the door hit an obstruction that is not detected by a sensor, it will stop after the programmed amount of time and not continue to drive into the obstruction. This may help prevent prolonged human entrapment as well as help prevent damage to the door and operator.

**To Program:**
1. Start with the door closed and the limits set.
2. Set the dip switches to "set Max Run Timer".
3. Press Open and wait for the door to reach the full open limit.
4. Return the dip switches to the desired wiring type (C2, B2, etc.) and Close the door. The Maximum Run Timer is now set and will allow the door to move in one direction no more than 10 seconds longer than it normally takes to travel from close to open.

**Example:** If it takes the door 13 seconds to open normally, the operator will stop running after 23 seconds. If the Max Run Timer is not programmed, it will run for 90 seconds total in either direction.

**Note:** For very large, slow moving doors, where the normal travel time is close to 90 seconds setting the MRT is essential to move the door the full travel distance.
STANDARD PROGRAMMING FEATURES CONT’D

MAS (Maintenance Alert System)

Feature: An internal cycle counter will activate a flashing LED on the three-button control station when the preset number of cycles is reached. Setting this feature is optional. By default, this feature will never activate.

Benefit: The consumer will be aware of when it is time for a scheduled maintenance on the door or operator.

To Program:
1. Close the door.
2. Set the dip switches to "set Maintenance Alert System"
3. Press "close" to zero out the counter.
4. Press "open" for every 5,000 cycles the operator should wait before flashing the LED.
5. Return the dip switches to your regular wiring type (C2, B2, etc.) and close the door.

EXAMPLE: The door is being installed with 30 thousand cycle springs. To set the MAS for 30,000 cycles press close, then open 6 times. Return the dip switches to the desired wiring type.

Special Notes about the MAS: A 5th wire must be run to the control station to activate the MAS LED. When the operator is serviced after the MAS has started the LED flashing, repeat the setup procedure for the next service visit. To see how many cycles the operator has been through set the dip switches to "set MAS" and watch the MAS led. It will flash once for every 1000 cycles the operator has been used then pause and repeat. Every time the operator leaves the close limit is counted as one cycle.

<table>
<thead>

</tr>
<tr>
<td>Stop</td>
<td>Adds 10,000 cycles to Maintenance Alert System Activation Timer.</td>
</tr>
</tbody>
</table>

OPTIONAL PROGRAMMING FEATURES

Mid Stop

Feature: Door will open to an installer set height that is less than fully open.

Benefit: The door will not open fully which will reduce unwanted airflow through the doorway. The door will not cycle fully providing longer door and operator life.

To Program:
1. Close the door.
2. Set dip switches to "set mid stop".
3. Press open (the door will begin moving)
4. Press stop when the desired mid stop height is reached.
5. Return the dip switches to the desired wiring type (C2, B2, etc.). The door will now stop at this height every time the door is opened.

Notes: A momentary open command will open the door fully from the mid stop position. Photo eyes and other safety devices will not further open the door from the mid stop position. Timer To Close will work from the mid stop position.
OPTIONAL PROGRAMMING FEATURES CONT’D

**Timer To Close**

**Feature:** Installer can set a timer to automatically close after a preset amount of time once all safety devices are unobstructed.

**Benefits:** Door will automatically close after being used. Extremely convenient where users may not be concerned with closing the door. For example Apartment Buildings and Fire Stations.

**Requirements:** Must have at least one of the following safety devices attached: CPS-L, CPS-LN4, CPSII, CPSII-N4. When running, the dip switches must be set for TS, T, or FSTS

**To Program:**
1. Close the door.
2. Set dip switches to “Set Timer To Close”
3. Press “close” to zero out the timer.
4. Press “open” for every 5 seconds seconds the operator should wait before attempting to close the door.

**Example:** The door is supposed to close 30 seconds after the user drives through. To set the TTC for 30 seconds press close, then open 6 times.

5. Return the dip switches to the desired wiring type. TS, T, or FSTS

**Notes:** For longer delay time settings, use the Single Button Control (terminal 1) to add 1 minute at a time. To deactivate the timer press stop. The timer will be reactivated on the next operation command.

**Reminders:** FSTS wiring mode allows the Timer To Close to be activated by the Single Button Control (terminal 1) only. T wiring mode allows the door to attempt to close only one time for safety purposes.

<table>
<thead>
<tr>
<th>Press This</th>
<th>To Get This</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open</td>
<td>Adds 5 seconds to countdown timer.</td>
</tr>
<tr>
<td>Close</td>
<td>Resets the timer to close to 0 seconds. Turns off electronic search for photo eyes after photo eyes have been intentionally removed.</td>
</tr>
<tr>
<td>Stop</td>
<td>Adds 5 seconds to “Red warning light before closing” time.</td>
</tr>
<tr>
<td>Single Button Control</td>
<td>Adds 60 seconds to countdown timer.</td>
</tr>
</tbody>
</table>

**Adjusting your red/green warning lights**

**Feature:** The logic board can adjust the amount of time that a warning light will flash before the Timer To Close will activate the door to close.

**Benefit:** Advanced warning of door closure helps prevent traffic collisions with the door.

**To Program:**
1. Set the dip switches to “Set Timer To Close”
2. Press stop for every additional 5 seconds of pre-movement warning.
3. Return the dip switches to the desired wiring type.

**Requirements:** Must have the Logic 2 red green warning light kit #001A4730 and must have at least one of the following safety devices attached: CPS-L, CPS-LN4, CPSII, CPSII-N4. When running, the dip switches must be set for TS, T, or FSTS. See red/green warning light instructions for further details.
## Troubleshooting Guide

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>PROBABLE CAUSE</th>
<th>RESOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each open command will open the door about a foot and a half then stop, after reaching the open limit each close command will close the door about a foot and a half then reverses back to full open.</td>
<td>RPM sensor is not adjusted correctly.</td>
<td>Reset the RPM sensor. Also verify that the software is version 260 or better. Order replacement chips from Parts and Service.</td>
</tr>
<tr>
<td>The door will open some but not completely. And the door will close some and not completely. Extra commands are able to get the door to move completely.</td>
<td>The Maximum run timer is not set correctly.</td>
<td>Reset the Maximum Run Timer</td>
</tr>
<tr>
<td>The door will open some but not completely. An extra open command is able to get the door to open completely.</td>
<td>There may be a Mid Stop set.</td>
<td>Reset the mid-stop by programming it to be at the open limit.</td>
</tr>
</tbody>
</table>
| The door will open but will only close after a 5 second delay with constant pressure on the close button. | a) The Photo Eyes, edge or other sensing device is obstructed or activated.  
   b) The Logic board thinks that the direct connect photo eyes are attached and blocked | a) Remove the obstruction, check the safety device wires for continuity and shorts.  
   b) Unlearn the photo eyes from the memory (see clear memory section). Also verify that the Logic Board Chip is Version 260 or better. Order replacement Chips from Parts and Service. |
| The operator will not respond to any commands | a) Operator control station is wired wrong  
   b) Motor is malfunctioning | a) Use the LEDs to help check correct wiring (see Diagnostic procedure) Verify that the board is accepting commands by using the onboard control station.  
   b) Verify voltage getting to the motor. |

### Clearing The Memory 3 - steps

**STEP 1:** To reset most of the user installed settings back to factory defaults:
1. Turn all the dip switches **ON**.
2. Press and hold the Learn button about 5 seconds.
3. The Learn LED will turn off while you hold the button down and turn back on about 5 seconds later.
4. Return the dip switches to the desired wiring type.

**Note:**
A. The Max Run Timer is now set to 90 seconds  
B. The Timer to Close is now set to 0 seconds  
C. The Mid Stop is now deactivated  
D. The Maintenance Alert System is now deactivated

**Note:** To clear the Mid Stop only Set/Program the Mid Stop at the open limit. The logic board understands this to mean that no mid stop is desired.
TROUBLE SHOOTING

STEP 2: To "unlearn" the photo eyes. The latest software automatically learns if direct connect photo eyes (CPS-L or CPS-LN4) are attached during the first open cycle of operation. If they are disconnected at some point after this, they must be unlearned.

1. Set the dip switches to set Timer To Close.
2. Press Open 2 times then Close 2 times and then Stop 2 times (order is not specific).
3. Return the dip switches to the desired wiring type.

STEP 3: Relearn RPM. Because factory default is set without a door attached to the operator, factory default setting is not a preferred status.

1. Start with the door closed and set all Dip switches to the off position.
2. Press open then press and hold the "learn" button on the Logic board (see picture) until the door reaches the full open position. You should see the Learn LED turn off after pressing the learn button; it will turn back on about 5 seconds later. If the LED did not cycle, start over and wait about / to fi second between pressing "open" and "learn".
3. Return the dip switches to your regular wiring mode and close the door.

Diagnostic LEDs
There should always be 3 green LEDs activated (24 VAC, 5 VDC, and STOP Button). Check for this first then proceed to check the status of the remaining LEDs

<table>
<thead>
<tr>
<th>LED</th>
<th>COLOR</th>
<th>MEANING OF EACH LED</th>

</tr>
<tr>
<td>Learn</td>
<td>Amber</td>
<td>This LED is normally on and in Diagnostic mode (all dip switches on) this LED will flash to indicate the chip is OK.</td>
</tr>
</tbody>
</table>

Diagnostic Checklist Procedure

1. Look for the 3 Green LEDs
   A. If the 24 VAC light is out, check the transformer and any interlock switches, then replace either the transformer or the logic board.
   B. If the 5 VDC light is out, and the 24VAC is lit, replace the board.
   C. If the Stop Button light is out, check the wiring to the control station, if the site does not require a stop button use a jumper across terminals 4 and 5. If the LED is still not lit call for more assistance.
2. Check your control station:
   A. Place the operator into diagnostic mode (all DIP switches ON)
   B. Watch the LEDs as each control button is pressed. The LEDs should light with each Open, Close, and Single Button Control command. The Stop should turn off the LED.
3. Activate the limit switches to verify functionality. Also watch the LED’s during door travel to check for over active limit switches.
4. Disconnect all devices and reattach them one at a time testing for failure after each item is replaced. This will determine which device is causing the failure. For further assistance call for technical support.
For use with Maintenance Alert System.

Check at the intervals listed in the following chart.

♦ Use SAE 30 Oil (Never use grease or silicone spray).
♦ Repeat ALL procedures.
♦ Do not lubricate motor. Motor bearings are rated for continuous operation.
♦ Do not lubricate clutch or V-belt.
♦ Inspect and service whenever a malfunction is observed or suspected.
♦ CAUTION: BEFORE SERVICING, ALWAYS DISCONNECT OPERATOR FROM POWER SUPPLY.

HOW TO ORDER REPAIR PARTS

OUR LARGE SERVICE ORGANIZATION SPANS AMERICA
INSTALLATION AND SERVICE INFORMATION ARE AVAILABLE 6 DAYS A WEEK
CALL OUR TOLL FREE NUMBER - 1-800-528-2806
MONDAY THROUGH FRIDAY 5 AM TO 6 PM (MST)
SATURDAY 7 AM TO 3:30 PM (MST)
WWW.LIFTMASTER.COM

WHEN ORDERING REPAIR PARTS
PLEASE SUPPLY THE FOLLOWING INFORMATION:
PART NUMBER DESCRIPTION MODEL NUMBER
Below are replacement kits available for your operator. For replacement of electrical box, motor or brake components be sure to match model number of your unit to kit number below to ensure proper voltage requirements. Optional modifications and/or accessories included with your operator may add or remove certain components from these lists. Please consult a parts and service representative regarding availability of individual components of kits specified below. Refer to page 19 for all repair part ordering information.

**Complete Electrical Box Replacement Kits**
To order a complete electrical box replacement kit, add a K- prefix to the model number of your operator. For example:

- GH5011L = K-GH5011L

* Electrical Box Kits include parts K72-12510 and K75-12514

**Electrical Box Sub-Assemblies**
- K72-12510 Limit Shaft Assembly
- K75-12514 Limit Switch Assembly

**Motor Kits**
- K20-1050C2 Models GH5011L, GH5021L
- K20-3050C4 Models GH5023L, GH5043L, GH5038L
- K20-5150C6 Models GH5025L
- K20-1075C2 Models GH7511L, GH7521L
- K20-3075C4 Models GH7523L, GH7543L, GH7538L
- K20-5175C6 Model GH7525L
- K20-1100C2 Models GH1011L, GH1021L
- K20-3100C4 Models GH1023L, GH1043L, GH1038L
- K20-5110C6 Model GH1025L
- K20-1150C2 Models GH1511L, GH1521L
- K20-3150C4 Models GH1523L, GH1543L, GH1538L
- K20-5115C6 Model GH1525L
- K20-3200C4 Models GH2023L, GH2043L, GH2038L
- K20-3300C4 Models GH3023L, GH3043L, GH3038L

- If a STOP button is not used, a jumper must be placed between terminals 4 and 5.

### 3 BUTTON STATION OR 3 POSITION KEYSWITCH WITH SPRING RETURN TO CENTER AND STOP BUTTON

#### STANDARD

- Maintenance Alert LED (RED)
- Maintenance Alert LED (WHITE)
- Keyswitch

#### 2 OR MORE

- Maintenance Alert LED (RED)
- Keyswitch

#### KEY LOCKOUT

- Maintenance Alert LED (RED)
- Keyswitch

### 2 BUTTON STATION OR 3 POSITION KEYSWITCH WITH SPRING RETURN TO CENTER

#### STANDARD

- Open
- Close

#### 2 OR MORE

- Open
- Close

### 1 BUTTON STATION OR ANY AUXILIARY DEVICE

#### OPEN / CLOSE

- 1
- 4
- B2, T, TS & FSTSD MODE ONLY

#### RADIO CONTROLS

- OPEN / CLOSE
- R1
- R2
- R3
- Any Commercial Type
- LiftMaster Brand Receiver

### SENSING DEVICE TO REVERSE OR STOP

**Note:** 11 & 4 are both the same common

- Either is acceptable

### EXTERNAL INTERLOCK

- Remove Factory Installed Jumper

- When Interlock is Used

- Sensing Device

- ONE

- All Wiring Types
